

Who's really behind the screen?

AI-generated content, deepfakes and how to check what is real

If you couldn't tell whether a video of your friend was real or AI-generated, what would you do?

What would you do first?

- Send it to a friend to check
- Look up where it came from
- Ask a trusted adult
- Delete it and say nothing

1 in 17 young people have been targeted by deepfake image abuse

Did you know?

8 million

DEEPPAKES PROJECTED
TO BE SHARED ONLINE IN
2025

up from 500,000 in 2023

98%

OF ALL DEEPPAKES

are non-consensual intimate
images

4 in 5

UK TEENAGERS

have used generative AI tools

So what do you actually do?

A

Don't share it

Sharing spreads the harm, even if you are trying to warn people.

B

Check the source

Is it from a verified account? A reverse image search shows where it came from.

C

Ask a trusted adult

Teachers, parents and safeguarding leads can help you check.

D

If it is intimate, report it

Do not view, save or share it. Tell a trusted adult straight away.

We put that on a slide two minutes ago. Should you have believed it?

"8 million deepfakes will be shared online in 2025"

Who	European Parliament	
When	2025	quoted in the AI Awareness Day teacher pack
Basis	A projection	made before the year was over — not a count
Against	500,000 in 2023	the figure it is measured from
Gap	No method shown	this deck never tells you how it was worked out

Two words worth knowing

Deepfake

AI-generated or manipulated video, image or audio that convincingly shows something that never happened.

Reverse image search

Uploading an image to Google Lens or TinEye to find where it originally came from.

Staying safe in an AI world

01

Stop

Before sharing, ask: could this be AI-generated?

02

Verify

Check the source, search the image, or ask a trusted adult.

03

Report

AI-generated intimate images of anyone are illegal. Tell a trusted adult.

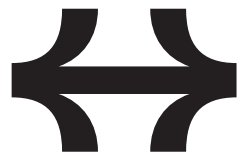

Three habits, in the order you would use them

Keep humans in the loop

Think before you post

Your digital footprint can be used in ways you never intended.

Making a deepfake of someone without their permission should be against the law, even as a joke.

Where do you stand?

- For
- Against
- Not sure yet

Build both sides

For	Against
A joke deepfake can still humiliate someone and spread far beyond the people it was meant for.	Satire of public figures is an important part of free speech.
Once shared, it is almost impossible to delete, and the harm can last.	The most harmful uses, such as intimate images and fraud, are already crimes.
A clear law would show that a person's face and voice belong to them.	Education and fast reporting tools may protect people better than a law that is hard to enforce.

Challenge card: What if the deepfake was of a famous politician and made a serious point?

Keep humans in the loop

The same debate, at every age

A**Primary · Years 5 and 6**

Should apps have to put a label on pictures and videos made by AI?

B**Secondary · Years 7 to 11**

Making a deepfake of someone without their permission should be against the law, even as a joke.

C**Post-16**

This house would make social media platforms legally responsible for deepfakes shared on their sites.

If any of this affected you

You will not be in trouble for asking for help.
