

ASSEMBLY · SMART

AI is already here!

What AI is actually doing when it gives you a confident answer

HANDS UP

Have you used AI today?

Have you used AI today?

- Yes
- No
- Not sure

You probably have

A**Unlocked your phone**

Face ID recognises your face.

B**Got a recommendation**

YouTube, Spotify and TikTok choose what comes next.

C**Typed a message**

Autocomplete and spell check predict your next word.

D**Asked a question**

ChatGPT, Siri and Google Assistant answer you.

How AI actually works

- Video: <https://www.youtube.com/watch?v=E4bvQZRC6Bo>

Predicting is not understanding

What a language model does	What understanding would need
Predicts the next likely word	Grasps what the words mean
Patterns from its training data	Experience of the real world
Always produces an answer	Can say 'I don't know'
Sounds confident when wrong	Knows where its knowledge stops

HALLUCINATIONS

Fluent is not the same as true

AI can give a confident, well-written answer that is wrong. Always check the facts that matter.

Being AI-smart

01

Know what it is

A pattern-matching tool, not a thinking being. It doesn't 'know' facts.

02

Verify

Check what matters against reliable sources before you trust or share it.

03

Be specific

The more specific your question, the better the output.

Three habits that follow from knowing how it works

Keep humans in the loop

EXIT CHECK

**One safe use of AI — and one use
you would always fact-check.**

One safe use, one to fact-check

■

■

DEBATE IT · NATIONAL AI CONVERSATION

**AI chatbots should have
to warn you every time an
answer might be made up.**

Where do you stand?

- For
- Against
- Not sure yet

Build both sides

For	Against
Hallucinations happen regularly, and fluent answers make them hard to spot.	The system often cannot tell when it is wrong, so the warnings would be guesses too.
A warning reminds people to verify before they trust or share.	Constant warnings cause warning fatigue, and people stop reading them.
Companies already warn about other risks, such as age limits and gambling.	Learning to verify is a skill we need anyway, warning or not.

Challenge card: What if the warnings appeared so often that everyone started ignoring them?

Keep humans in the loop

The same debate, at every age

A**Primary · Years 5 and 6**

Should you check everything AI tells you?

B**Secondary · Years 7 to 11**

AI chatbots should have to warn you every time an answer might be made up.

C**Post-16**

This house would require AI tools in schools to guide students rather than give answers.

If any of this affected you

You will not be in trouble for asking for help.
