

AI is already here!

What AI is actually doing when it gives you a confident answer

 **Have you used AI today?**

Have you used AI today?

- Yes
- No
- Not sure

You probably have

A**Unlocked your phone**

Face ID recognises your face.

B**Got a recommendation**

YouTube, Spotify and TikTok choose what comes next.

C**Typed a message**

Autocomplete and spell check predict your next word.

D**Asked a question**

ChatGPT, Siri and Google Assistant answer you.

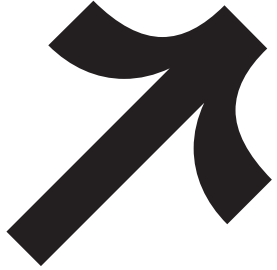

How AI actually works

- Video: <https://www.youtube.com/watch?v=E4bvQZRC6Bo>

Predicting is not understanding

What a language model does	What understanding would need
Predicts the next likely word	Grasps what the words mean
Patterns from its training data	Experience of the real world
Always produces an answer	Can say 'I don't know'
Sounds confident when wrong	Knows where its knowledge stops

Fluent is not the same as true

AI can give a confident, well-written answer that is wrong. Always check the facts that matter.

Being AI-smart

01

Know what it is

A pattern-matching tool, not a thinking being. It doesn't 'know' facts.

02

Verify

Check what matters against reliable sources before you trust or share it.

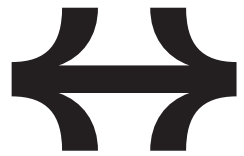

03

Be specific

The more specific your question, the better the output.

Three habits that follow from knowing how it works

Keep humans in the loop

**One safe use of AI — and one use
you would always fact-check.**

One safe use, one to fact-check
